

Year 8 Practice Paper 1 Solutions

Practice Exam_all topics_ANSWERS

Solve problems of duration involving 12- and 24-hour cycles across multiple time zones

Question 1 (*Simple familiar*)

a) **Calculate** the time:

2 ½ hours after 13:00

$$13:00 + 2h = 15:00$$

$$15:00 + 30m = 15:30$$

3 hours before 15:30

$$15:30 - 3h = 12:30$$

70 mins after 04:55

$$04:55 + 60m = 05:55$$

$$05:55 + 10m = 06:05$$

b) Ariana flight departs at 5:15am and lands at 10:45am in the same time zone. How long is her flight?

$$05:15 \text{ to } 10:15 = 5h$$

$$10:15 \text{ to } 10:45 = 30m$$

Therefore, Ariana's total flight time is 5 hours and 30 minutes.

c) Marcos starts work at 9:18 am and will work until 3:20pm. How long will he be at work?

$$09:18 \text{ to } 03:18 = 6h$$

$$03:18 \text{ to } 03:20 = 2m$$

Therefore, Marcus is at work for 6 hours and 2 minutes.

d) Assuming he has a half hour lunch break, how much time will his pay sheet show?

$$6h \ 2m - 30m = 5h \ 32m$$

Therefore, his pay sheet will show 5 hours and 32 minutes.
